

New IMCP2 Programming

PLEASE NOTE THE REMOTE CONTROL SET IS ALREADY PROGRAMMED.

Should you require future programming the steps are below:

1. Turn off power to fan at isolation / wall switch and wait for 30 seconds then turn power back on, the fan will beep.
 2. Immediately hold and press the “Forward/Reverse” button as soon as the isolation switch is turned on for 8-10 seconds.
 3. You will hear another beep for the fan to be successfully programmed.
- Handset cross programming - One remote handpiece must be attached to the receiver at all times. In the event of handpiece cross programming, please program the same handpiece twice to delete irrelevant/unwanted handpiece.
 - Please note this handset is a generic handpiece as the old factory has shut down, our new factory has designed a remote so we can continue to support our product. So some of the buttons have different functions. Please see below diagram for your reference:
